

# **BORACOL B10RH - TEAK DECK TREATMENT**

B10Rh is predominantly used as a biocide for the control of lichen, fungal and algal growth on stonework, concrete, brickwork, masonry and tiles. However more recently it has also been utilized as a treatment against mildew on teak decks.

The following basic recommendations have been PROVIDED TO US BY USERS of this product as a reliable treatment for wooden decks:-

- Make sure teak deck is free of surface water / dry before application.
- Apply by brush or roller.
- Allow 3 days to “dry”.
- For best results the deck should not come into contact with rain during the “drying” period.

Please do not be disappointed if you do not see any positive result immediately. After about 10 days things will start to happen. The mildew will disappear and will not return for some time.

This product is approved under the Control of Pesticides Regulations for use as directed HSE. No 4911.
